**COMMITMENT TO EMPLOYEES, PARTNERS, HIGHLIGHTS  
SEMI DICE, INC'S 35<sup>TH</sup> ANNIVERSARY  
DISTRIBUTOR OF WAFER & DIE PRODUCTS**

AUGUST 2011, LOS ALAMITOS, CA – Semi Dice, Inc, the industry leading wafer and bare die supplier and distributor, announces its **35<sup>th</sup> Anniversary**, celebrating 35 continued years of serving the needs of wafer and bare die users in the microelectronic industry. Semi Dice credits for this success its two leading mantras—its commitment to its employees and focus on customers success by providing consistent, quality products.

Semi Dice prides itself not only on standard-setting quality controls but continues it's fundamental commitment to employees. This has enabled Semi Dice to maintain an average tenure for its employees almost half that (18 years), of the company's existence.

“This 35<sup>th</sup> Anniversary is a great achievement, especially in this industry and particularly with our steadfast commitment to our employees through more than three decades of varying economies,” said Dan Cormack, CEO. “Our employees, customers, partners and suppliers, have made us the longest-standing, largest, most successful, genuine bare die distributor in the semiconductor industry. The fact that so many of our employees have been here for so long enables us to efficiently deliver a high quality product that our customers expect and require.”

Semi Dice maintains specific focus on distributing wafer and bare die products and contract wafer processing. Although its growth has accelerated through continued additions of semiconductor industry manufacturer-alliances, Semi Dice retains its core philosophy of “doing one thing and doing it best”.

**About Semi Dice, Inc.**

Semi Dice is a die processor with a High Reliability Division dedicated to value-added processing and services. Our company remains highly focused on our customers' individual requirements. Whether your requirements are for commercial devices or high reliability products tested and supplied to your source control drawings, Semi Dice can react quickly to provide solutions.
